CL64eN-BAS GAS

High Temperature Rack Conveyor Dishwashing Machine

WARNING: Plumbing and electrical connections should be made by qualified personnel who will observe all the applicable plumbing, sanitary, safety codes and National Electrical Code.

WARNING: Gas heat machines must be provided with a means to exhaust the flue gases to the exterior of the building.

Plumbing Notes: Minimum incoming water temperatures: 110°F for 30kW internal booster, 140°F for 15kW field converted internal booster, 180°F without internal booster. Building flowing water pressure to dish machine is 20 PSI, (+/- 5 PSI). For non-booster machines, a PRV with internal expansion bypass is required. When ordered as an accessory, ½" brass regulator must be installed before the booster. Water temperature to the regulator must not exceed 140°F.

Recommended water hardness to be 3 grains or less for best results.

If gas pressure is higher than 7" (Natural) or 11" (LP) W.C., a pressure regulating valve must be installed (by others) in the gas line to the dish machine.

Electrical Note: Dishmachine not provided with internal GFCI protection.

NOTE: 30kW Booster Heater field convertible to 15kW when 140°F incoming water provided. (Conversion instructions located in machine control box. Contact factory for 15kW booster amperage ratings.)

NOTE: Additional CLeN Voltages and Amperages are available, see document F40972.
