

## VENTLESS ENERGY RECOVERY - TECHNOLOGY TO CAPTURE HEAT & STEAM

cold inlet water for the booster, reducing

the energy to heat it for the sanitizing

## Save more than \$3,500 on installation costs\*

is condensed out of the air in the

wash chamber.

Ventless Energy Recovery captures heat energy while condensing steam from the wash and rinse cycle to preheat the incoming cold-water for the final rinse cycle.

Lower your HVAC requirements from reduced latent and sensible heat gain to the room, and save more than \$3,500 by eliminating the need for a vent hood.

the need for a costly vent hood.
